

Testing Strategy

Layer	Tool	Purpose
Unit Test	pytest + vitest	Test individual functions, business logic, no dependencies
Integration Tests	pytest + FastAPI	Test API endpoints with real/mock database
E2E Test	Playwrigth	Test full workflows: user logs in → runs agent → saves data
API Contract Tests	Pytest + requeust assertions	Ensure API responses match schema

Don't over-engineer: You don't need 100% E2E coverage. Focus on:

-  Happy path (user completes one full section)
-  Edge cases (empty inputs, errors)
-  Skip: minor UI interactions, trivial branches
